Abstract

Figure 6

Figure 6 displays two bar charts comparing the number of cases across different age groups (0-9, 10-19, 20-29, 30-39, 40-49, 50-59, 60-69, 70-79, 80-89, 90+) for two categories: "Cases by Age Group" and "Cases by Sex". The x-axis represents the age groups, and the y-axis represents the number of cases, ranging from 0 to 100. The legend indicates that blue bars represent "Cases by Age Group" and red bars represent "Cases by Sex".

The "Cases by Age Group" chart shows a significant peak in the 20-29 age group, reaching approximately 95 cases. Other notable peaks occur in the 10-19 age group (around 75 cases) and the 30-39 age group (around 65 cases). The number of cases generally decreases as the age increases beyond 39.

The "Cases by Sex" chart shows a similar trend, with a peak in the 20-29 age group (around 85 cases). However, the distribution is more spread out across other age groups compared to the "Cases by Age Group" chart. Notable peaks also occur in the 10-19 age group (around 65 cases) and the 30-39 age group (around 55 cases).

Overall, both charts indicate that the highest number of cases occurs in the 20-29 age group, followed by the 10-19 and 30-39 age groups. The "Cases by Age Group" chart shows a more concentrated distribution of cases compared to the "Cases by Sex" chart.

1. **Identify the main topic or question.** The main topic is the relationship between the number of people in a group and the number of handshakes.
